Your three biggest wins

- 1. Tell search engines who you are:** Your homepage has no structured description of your organization, so search engines and AI assistants have to guess your name, purpose and website.
- 2. Fix links that go nowhere:** Visitors and search engines who follow these links hit an error page and often leave.
- 3. Make your homepage load faster:** On a typical phone your main content appears after 5.8 seconds. Many visitors leave after about 3 seconds, and search engines favour faster pages.

Summary

Your homepage is slow on phones, which loses visitors before they read anything. Some people with low vision or who use screen readers will struggle with parts of your homepage.

We found 6 things that make it harder for search engines and AI assistants to understand and show your pages.

Your website links to Facebook, Instagram, LinkedIn, YouTube.

Start with the 5 items under "Do first" in the action plan: they make the biggest difference.

Search

How easily search engines and AI assistants can find, understand and show each page.

Follower counts and engagement need each platform's permission and are not part of this report.

Your action plan

Every fix, in the order we suggest. "Who" is a suggestion: your web person is whoever manages your website.

Do first

Tell search engines who you are

Your homepage has no structured description of your organization, so search engines and AI assistants have to guess your name, purpose and website.

Search

About 10 minutes

Who: SEctOr (WordPress)

Where: /

Fix links that go nowhere

Visitors and search engines who follow these links hit an error page and often leave.

Website health

About 5 minutes per link

Who: Your web person

Where: /annual-report-2023.pdf, /events/walkathon-2024

Make your homepage load faster

On a typical phone your main content appears after 5.8 seconds. Many visitors leave after about 3 seconds, and search engines favour faster pages.

Website health

1 to 3 hours, usually smaller images and fewer plugins

Who: Your web person

Where: /

Describe your images

5 places on your homepage make this hard for people with low vision or who use a keyboard or screen reader.

Accessibility

About 30 minutes

Who: Your web person

Where: /, /programmes/teacher-training

Add a share preview for WhatsApp, LinkedIn and Facebook

When someone shares your site, the link shows no picture or a wrong title. A good preview gets far more clicks.

Social and sharing

About 15 minutes

Who: Your web person

Where: /

This month

Make each page title different

When several pages share one title, search engines cannot tell which page answers which question.

Search

About 5 minutes per page

Who: Your web person

Where: /, /team, /board

Write a one-line description for each page

This is the grey text under your link in search results. Without it, search engines pick a random sentence.

Search

About 5 minutes per page

Who: You

Where: /programmes, /programmes/reading-circles, /programmes/teacher-training, /stories, /stories/mee na and 12 more

Give each page one main heading

One clear main heading tells search engines and screen readers what the page is about.

Search

About 10 minutes per page

Who: Your web person

Where: /, /stories

Fix the technical warnings on your homepage

The page shows browser warnings, such as insecure parts or outdated code, which can put off visitors and search engines.

Website health

About 1 hour

Who: Your web person

Where: /

Make text easier to read against its background

14 places on your homepage make this hard for people with low vision or who use a keyboard or screen reader.

Accessibility

About 30 minutes

Who: Your web person

Where: /

Give every link a clear name

3 places on your homepage make this hard for people with low vision or who use a keyboard or screen reader.

Accessibility

About 30 minutes

Who: Your web person

Where: /

Fix your YouTube link

The link on your website leads to a page that no longer exists.

Social and sharing

About 5 minutes

Who: You

Where: /@asha-sample-old

Later

Add more useful words to thin pages

Pages with very little text give search engines and AI assistants almost nothing to quote.

Search

About 30 minutes per page

Who: You

Where: /donate, /board, /reports, /careers

Say which language your pages are in

Setting the page language helps search engines show you to the right audience and helps screen readers pronounce words correctly.

Search

About 5 minutes, once for the whole site

Who: Your web person

Where: /privacy

What we could not check

- This is a sample report built from made-up data to show the layout. Asha Foundation is fictional.

Prepared by SEctOr on 4 October 2026 for Asha Foundation (sample). Speed and accessibility measured with Lighthouse and axe-core on a simulated mid-range phone.
